HTML, CSS and JavaScript

Helping to build a BETTER website

Presented By:
Deveaughn Bennett and Gianni Cardoza
HTML, CSS and JavaScript

* What are HTML, CSS, JavaScript

* What do they do

* How does it work
HTML

Your Building Blocks For Your Site

- **Links** - An object that are connected to other documents.
- **Tables** - An arrangement of rows and columns
- **Text** - The main body matter.
- **Tabs** - A tag or label.
HTML 101

This is HTML code in its basic form.

You have entered the matrix
You have entered the matrix
You have entered the matrix

Should I say any more!!!!
CSS

Cascading Style Sheets
CSS

Give Your Site Its Own Identity

- **Colors** - Any distinctive color or combination of colors applied to text.

- **Format** - The arrangement of data for computer input or output.

- **Style** - A particular kind, sort, or type, which applies to form, appearance, or character.
Yeah!!!!

GRC 101 Class
This is an example of backgrounds, colors and formatting

I felt like typing this
JavaScript

The Object Scripting Language

- Displays information based on the time of the day
- Detects the visitor's browser
- Control Browsers
- Validate forms data and Create Cookies
- Add interactivity to your website and Change page contents dynamically
